Foreword

Peter Drew has been successfully running his Internet business since 1995. Originally using his software automation techniques to sustain top 5 affiliate listings for many of the largest 11 figure affiliate websites on the Internet, he provided these companies with millions of new customers each year.

For the last 6 years he has focused solely on creating Automated Software Solutions to Create and Promote websites in the search engines.

Pete's sophisticated SEO strategies and advanced automation techniques have culminated in a software solution of Immense Power and Utility. The new Brute Force SEO: EVO2 release from Peter's XRT Services Pty., Ltd. Not only provides the customers of his software High-quality backlinks that the search engines require to provide quality rankings for the websites the customers are promoting; But also gives the web 2.0 platforms his software utilises the free quality content they desire to grow and develop in their own right, resulting in a true "Win-win" situation for all.

The powerful EVO II software automates the advanced SEO strategies he has developed over the years through a simple to use Wizard style software interface. The result is the execution of these High Level Search Engine Optimisation strategies totally automatically, resulting in massive time and cost savings to the user along with vastly enhanced search engine rankings and traffic.

Introduction: How To Use This Guide

[Top](#)

Why are we here?

Well, I'm here to share with you years and years of Search Engine Optimisation experience in the form of a simple to use Automated Software Solution. I'm also here to show you how to use it to get your websites ranked highly in the search engines, so you can enjoy the benefits of free search engine traffic!

You are here to get used to using this software and to start seeing some amazing results in the search engines, specifically Google ;-)

I'll start off with explaining a little on getting websites to rank well in the search engines. It's important to read the information below, though do not stress out about not understanding any of it, because the software does it all for you. I provide this information mainly so you can appreciate what the software actually does automatically!

Search engines rank websites in their indexes relative to votes cast by other websites in the form of hypertext links from one site to another. Its like a popularity vote. The more votes the better, or the more links the better. Though its not as simple as that: other considerations are the quality of the votes supplied.

The quality of votes supplied means:

- 1) The previous ranking by the search engines of the website that is providing the link to your website.
- 2) The demographic of the votes cast, meaning the age of the website casting the vote. An existing website that has been acknowledged by search engines as an authority website, that has been around for say 5 years will cast a stronger vote than another website that is only 12 months old etc.
- 3) The location of the website casting the vote. If there are many websites casting votes to your website from many different places around the world, this shows to the search engines that your website has a wide audience and then grants it higher rankings accordingly.

The opposite of this would be 50 domains hosted on just one server, each with links pointing to your website. This situation in the past used to work well though these days does not help get your website ranking highly for competitive terms in the search engines.

The best case scenario is to get a LOT votes or links from previously aged, high trafficked, high ranking websites from all around the world casting votes via links to your website. This is the recipe for success in getting your website ranked for competitive terms that supply free search engine traffic to your website.

After linking to your website, we need to address several "On Page" items:

1. On page Search Engine Optimisation and Title Tags...
 2. Keyword in URL...
 3. Anchor text or Link Names...
 4. Semantic relation to keyword phrases.
-
1. Onpage SEO and Title Tags.

The absolutely most important part about getting websites ranked highly in the search engines is a great backlinking program. Though maximum efficiency is achieved by utilising the same anchor text in the links pointing to your website, be it the domain itself or sub directories within it and the same keyword phrase that is in the anchor text, in the title of the website you are

promoting. Each webpage of your site has what's called a title tag. e.g if you view the source of any webpage, you will see the title tag like this <TITLE> Website title goes here </TITLE>.

I would go as far as saying, that unless you have your chosen keyword phrase in this title tag, you will have very little chance of ranking well for your chosen keyword phrase. I will explain below and in other supplied documents how you can maximise your use of adding multiple keyword phrases in one title tag to get multiple high listings from just one webpage. Additionally the anchor text of the links pointing to your site, should reflect they keyword phrase/s listed in your title tags.

2. For the purpose of this document we will focus on what is required when using this software to get rankings in the search engines.

(a) Domain name. For best results having your targeted keyword phrase in the domain name is a big plus when targeting competitive niches in the search engines, not 100% required, though why make the process any more difficult than needed, when possible I always try to get my chosen keyword phrase in the domain name.

(b) Keyword phrase in URL. e.g. domain.com/keyword-phrase/ I use the keyword phrase in URL in most sites I promote in the search engines. Typically for any main keyword phrase we are targeting, there are Many more related keyword phrases.

My domain will have the top level keyword phrase in it, and over time I will then promote the sub keyword phrases individually. e.g my first promotion will be keywordphrase.com then once I have achieved the rankings for this term I will then proceed to promote keywordphrases.com/2nd-keyword-phrase/ URL in my software.

Once I have gained rankings for this 2nd term, I will then promote keywordphrase.com/3rd-keyword-phrase/ in the search engines using my software. The list is ever growing, On my main money earning websites, I continue to promote these with new related niches found. I will explain how to find these related niches later on in this document.

Additionally I like to have domains with my keyword phrase in them, because I can then place links to my domain on sites that do not grant the ability to provide anchor text, only the domain name itself.

And from a domain with my keyword phrase in it, I get the benefit of the anchor text in the domain itself helping my site to rank well for that chosen term. e.g. www.dogtraining.com has the keyword phrase dog training in it. Compared to www.greatdeals.com If my product is an Iphone, dropping the link www.greatdeals.com will not help me rank for the term iphones.

3. If you are experienced with seo, go to No 3. Anchor Text is the name we give the link to our website. e.g. [seo software](http://www.bruteforceseo.com) is a hyper link, the name of the link is "seo software" the domain it is linking to is <http://www.bruteforceseo.com> the HTML code for this link is `seo software`

The reason I explain this is, because the search engines rank your website according to the name of the links pointing to your website.

4. Semantic relation to keyword phrases, huh? This is a term I've coined, providing semantically

related keyword phrases as anchor text in link promotions.

Let me preface this section by stating, Google has some of the brightest minds on the earth working on the search engine ranking algorithms. Their goal is to rank websites by a voting system that is provided by human interaction. Doing the best to have the voting system reflecting a mass human interaction on the Internet.

They achieve this by using their massive resources to interrogate the data provided to them. So its our goal to provide a linking structure that appears as individually humanly created as possible. In the past you could create 1000 backlinks pointing to your website using just the one keyword phrase.

Eventually, though the search engines caught up and recognised this as a non human activity and now rank the site accordingly, or apply a penalty for this. So today to achieve maximum results from a massive linking campaign such as provided by EVO II, we provide a variety of related keyword phrases as anchor text all pointing to our designated URL, though still providing a higher % of links using our main keyword phrase as the majority anchor text.

Confused? Don't worry, the EVO II software takes care of all the above for you automatically.

Ok, on to getting started with the software...

Why Use Automated Software?

[Top](#)

Why Automation?

Well, that's easy: This automated software solution speeds up the process of promoting your web site in the search engines, and gets your time spent down to under 5 mins user input, and replaces 8 full days at 8 hours a day of hand SEO work. We know that the software is blindingly fast, though it expands your SEO horizons.

With the power of SEO automation under your belt, it gives you the freedom to test niches that were just too time costly to check in the past: before EVO II came along you could be risking 8 days worth of time on a niche, without even knowing whether it was profitable or not.

Now With EVO II, you can be more flexible with your niche selections, targeting those more competitive niches and examining the results live in Google. You are only exposing yourself to a risk of 5 minutes time, where previously the time investment was so large that these niches were never tested. This is where the true power of EVO II becomes apparent.

Installing The Software.

[Top](#)

Download the software from www.bruteforceseo.com/evo2.zip

Please ensure that your Windows Operating system is completely up-to-date by visiting [Windows Update](#).

To run this software your computer needs to be fully updated and running the latest .NET 3.5

1. If your windows update has not downloaded .NET 3.5 get it here.

www.microsoft.com/downloads/details.aspx?FamilyId=333325FD-AE52-4E35-B531-508D977D32A6

2. You need the latest version of Internet Explorer installed on your computer. This software uses the IE Modules to communicate with the many High PR sites in the software.

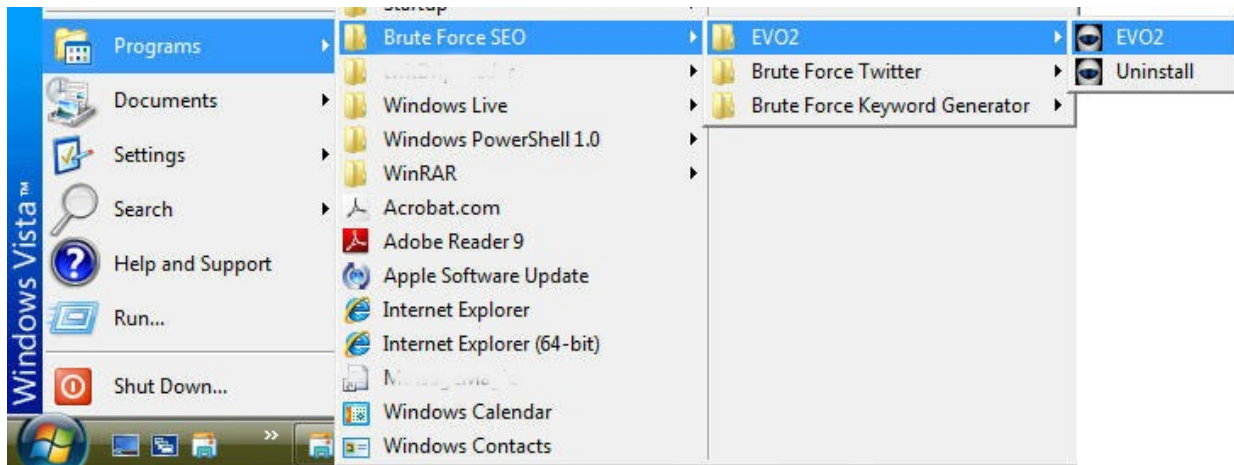

Download it Here:

<http://www.microsoft.com/windows/Internet-explorer/default.aspx> (this is recommended though not 100% required. But best to have the most recent IE on your computer anyway.)

In the evo2.zip = evo2.msi this is the installation file.

Please install these two above files now, Then install the software.

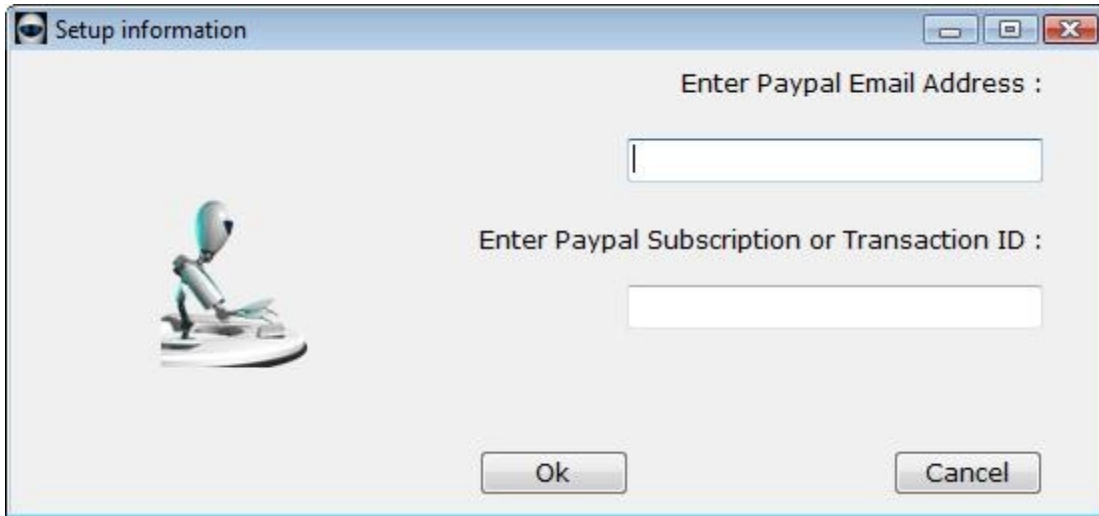

Once you have installed the software, go to START / Programs/ Brute Force SEO / EVO 2/ EVO2.exe To start the software.

Start EVO II First!! EVO II authenticates your license for all software installed.

You can then start the other Twitter Smackdown and Keyword generator, once EVO 2 has been started first.

Upon starting EVOII, you will be presented with this log in screen:

This is where you enter your:

1. Paypal Email address .
2. The Subscription ID. This is the subscription ID created by Paypal or Transaction ID. This is presented to you on the sales page when registering, or it is supplied:
 - (a) In the email sent to you via PayPal or,
 - (b) You can log into your PayPal account to get this Subscription ID or Transaction ID.

Note: Only one Paypal email address, per trial period. Meaning, you can only take the trial once. If you cancelled and would like to join this membership at a later date, you will need to contact support www.support.bruteforceseo.com and see if any slots are still open.

NOTE: When using the free trial of EVO II, if you cancel the subscription in PayPal, you will lose access to the forum and the software will stop working IMMEDIATELY.

If at any time you cancel the subscription after paying you will loose access to the SEO Fight Club forum.

Now your software will display this splash screen:

... and will authenticate itself by connecting to the EVO II Authentication server and then open the main software.

(On the rare occasion the software gets stuck on this screen and will not pass it, this means your computer has software installed that is blocking the software from reaching the Internet, such as a firewall or anti viral software, to which you will need to give permission to this software to access the net) ((Note: Norton 360 users will need to completely disable Norton 360 to allow this software access to authenticate itself.))

Software Operation and Overview.

[Top](#)

This is an automated SEO solution. The EVO II Software:

- Creates websites using article content provided by you, or sourced by the software at the same time providing powerful links in these websites pointing back to your money site.
- Promotes your articles to the top Article Directories on the Internet.
- Provides links on the top social bookmarking websites on the Internet.
- Submits your RSS feeds and your new sites RSS feeds to the top RSS Aggregators on the Internet while at the same time, mashing your new URL's and existing RSS feeds and then promoting these new feeds to the top RSS aggregators on the Internet.
- Gives the ability to promote your links on the top Video Directories on the Internet. Puts your links on extremely powerful High Page Ranked Websites on the Internet, while at the same time, blending these high page rank account URL into new RSS feeds and promoting these new RSS feeds to the top RSS Aggregators, providing your money site powerful 1 2 and 3, one way links back to your money sites URL.

To achieve this, the software goes out and creates many accounts across all these web 2 platforms, while creating these user accounts the software automatically solves the human verification capture devices for you and additionally confirms the links sent to the email address the software has created for you.

We use 2 sets of accounts.

1. Static Accounts.

Static accounts are created on these web 2 platforms:

- a) Rss Aggregators.
- b) Article Directories.
- c) Video Directories.
- d) Social Bookmarking Directories.

We only need to create these accounts once. The software uses these accounts to continually distribute your links through. Once you become a full member you will learn how to utilise these links to further enhance your rankings in the search engines.

Typically a user will only need one set of these accounts, though many of my customers have SEO clients that they use my software on. Generally these customers create one set of static accounts per SEO customer they have. You can create unlimited sets of static accounts. You can import or export any set of Static accounts you create. If I have an SEO client I will save this set of static accounts as the name of this SEO client for future reference.

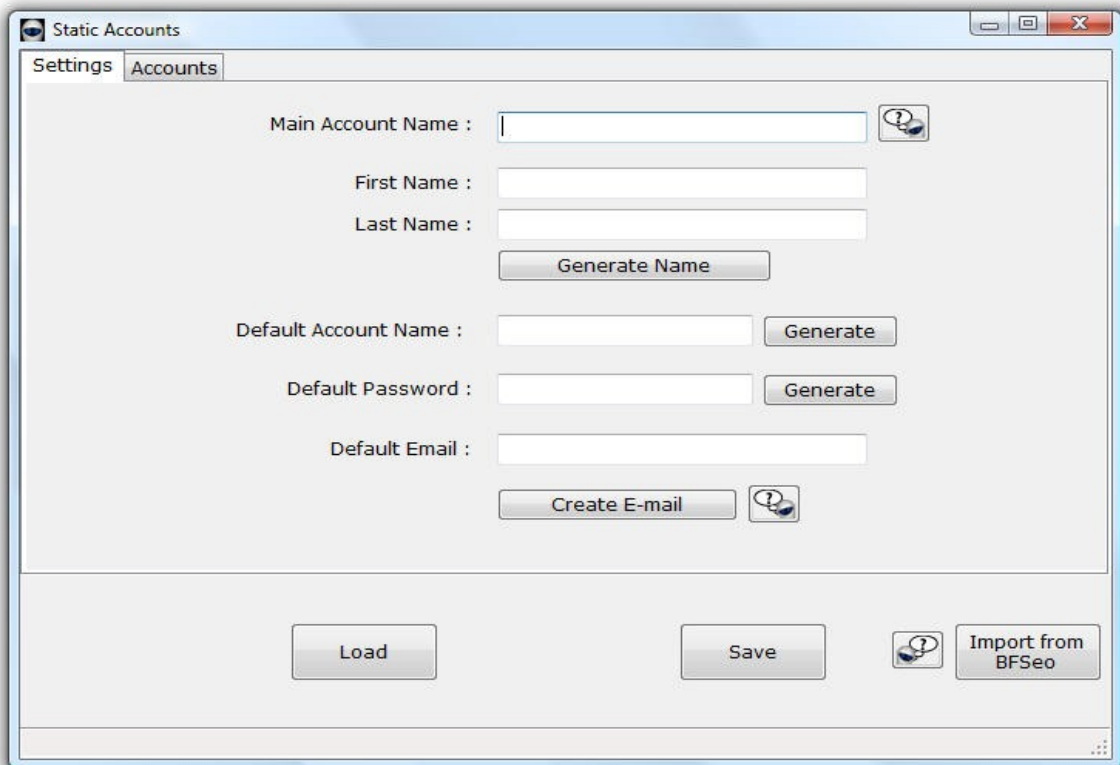

You need to create a set of static accounts first, to be able to use the software.

Do this Now!

To create your set of Static accounts, click on the CREATE STATIC EVO II ACCOUNTS HERE button.

This will bring up this window:

This is very simple to use. Choose a unique name as the Main Account Name: Use Only letters! No

spaces, underscores, dashes, or symbols.

Then click on the Generate name button

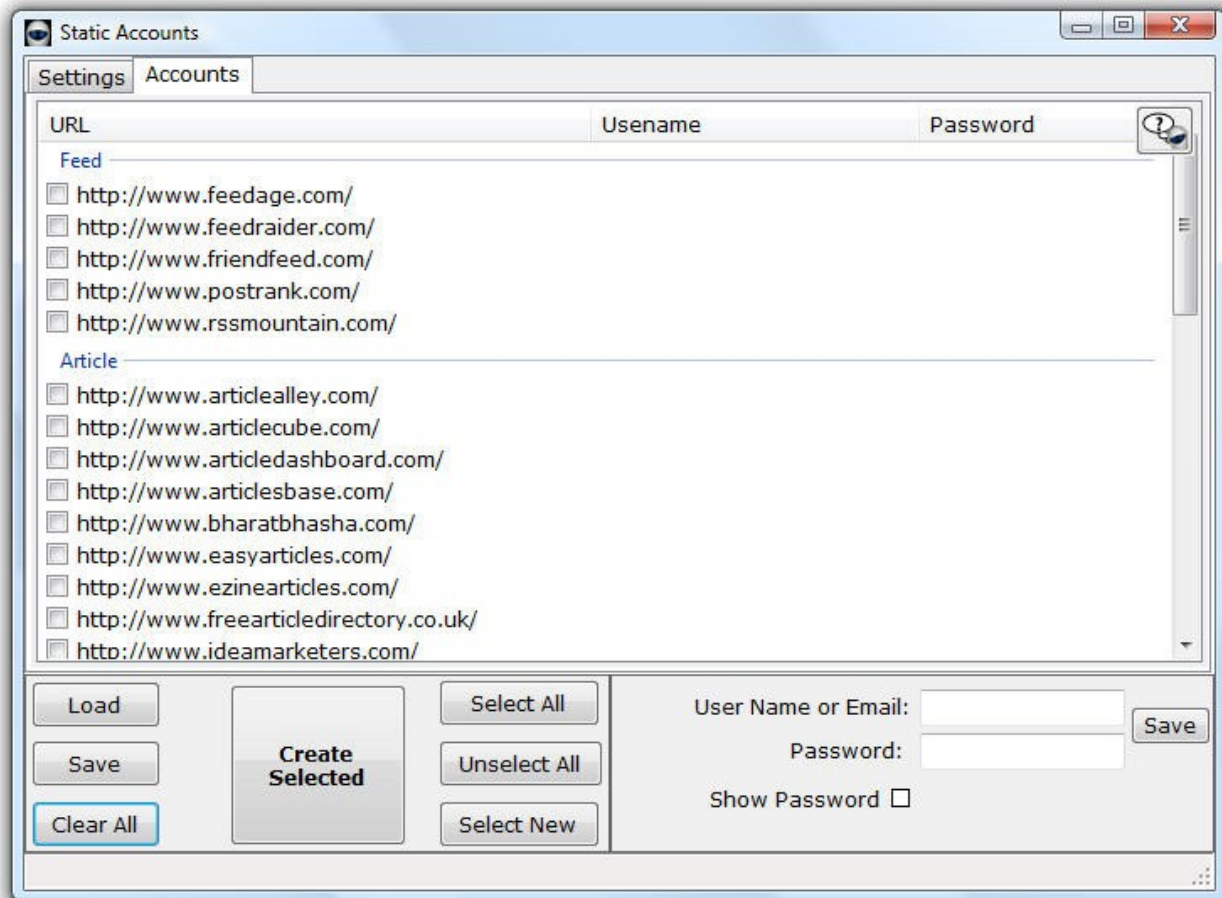

Then click on the Generate button to the right of the Default Account Name :

Then click on the Generate button to the right of the Default Password:

Then click on the Create Email button.

The software will then go out and create an email based on this information you have provided to either Yahoo email or Gmail. The software will pop up a window where the capture image is displayed. Let the software complete the capture for you. Typically with Gmail, Google accounts it can take 2 or 3 times for capture details to be supplied before the new Gmail account is created.

Once the email address is created, click on the Save button, to save this information to your hard drive, generally I save this file as the same name as my main account name.

Once you have completed the Settings tab, click on the Accounts Tab.

This is a list of the static accounts we use in EVO II. We can update these accounts on the fly, if we add more sites to this list you will get an email alerting you to this.

To create all these accounts, you only need to click on the Select All button, to select all these accounts, then click on the Create Selected Account.

The software will pop up a preview window and you will see it go out to all these sites and create user accounts on them and solving the captures presented to it along the way. You will then see the email accounts loaded and flash past, this is the software clicking on all the confirmation emails sent to the email account.

Once completed, you will see the account names and passwords presented to the right of each of these sites. Please check to make sure all sites are completed. You may find one of the sites was not created, this could be because the site we are trying to create an account on is temporarily down, or running very very slow.

There is nothing we can do about circumstances like this, though we do provide you the link to this site by clicking on the domain name on the left, where you can then register manually and supply the username and password in the fields provided to the right, then click on the save button to save this new user information to this site. Then click on the Save button on the left to save these accounts to your hard drive. (at the time of writing this document, Revver.com has issues registering new accounts, not related to this software, though I have left this site in this account creator, as I'm sure they will have it fixed soon.)

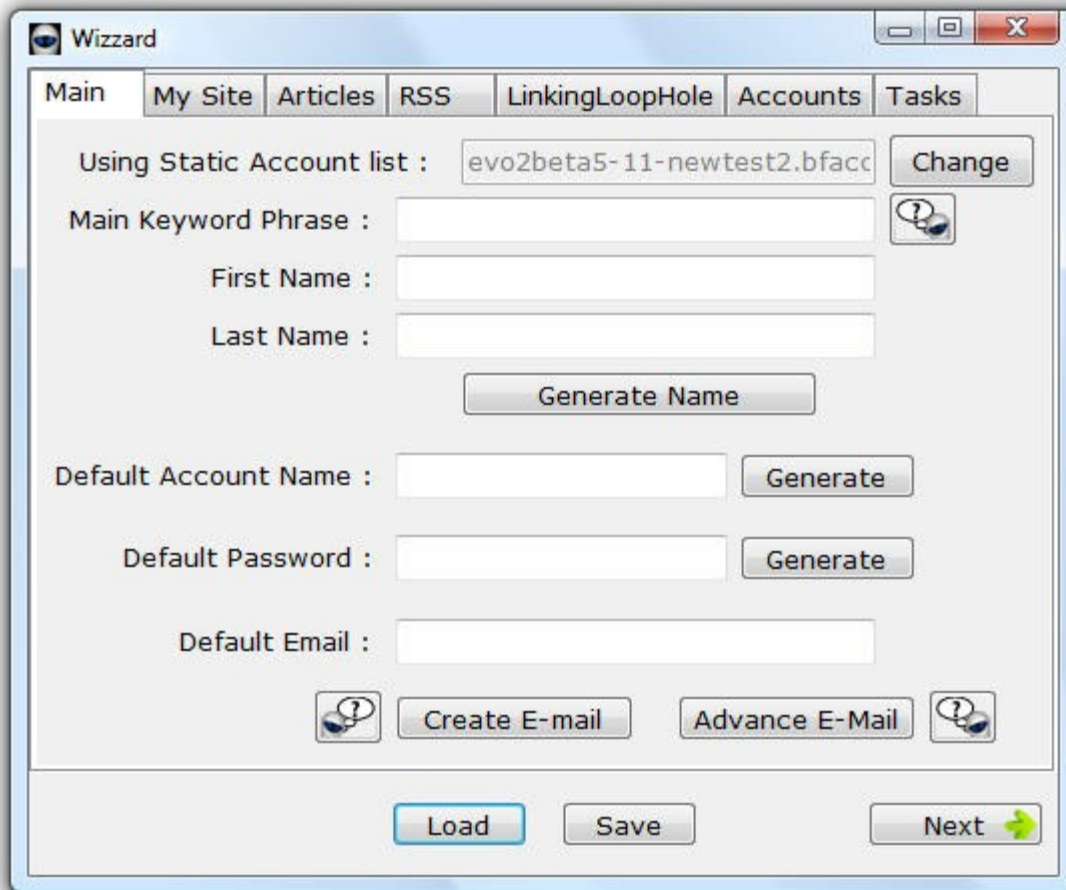

Now you have created all your static accounts.

Click on the Start EVO II Here button.

The next window you will see will be the Wizard:

This is the EVO II Software easy to use Wizard.

Start on the Main tab.

The software will load the last used Static Accounts created. Though you can use the Change button top right to select any Static Accounts created.

Enter your Main Keyword Phrase: This is the keyword phrase you want to Rank for!

Click on the Generate Name button, this will provide you with a random first and last name to use with the new accounts the software is about to create for you.

Then click on the Generate button to the right of the Default Account Name:

Then click on the Generate button to the right of the Default Password:

Now Click on the Create Email Button and EVO II will go out and create a new email address for you, chosen randomly between an Yahoo email account and a Gmail email account.

Note: You can use the static accounts over and over and over, though for each new linking campaign, you need to create new user account names and email addresses.

Click on the Save button, save this project to your hard drive. Typically I call this project file, the name of the keyword phrase and the domain name. I use my account names saved as my records, so I can load this folder containing (the same folder the software is installed into) to see my history of linking

campaigns.

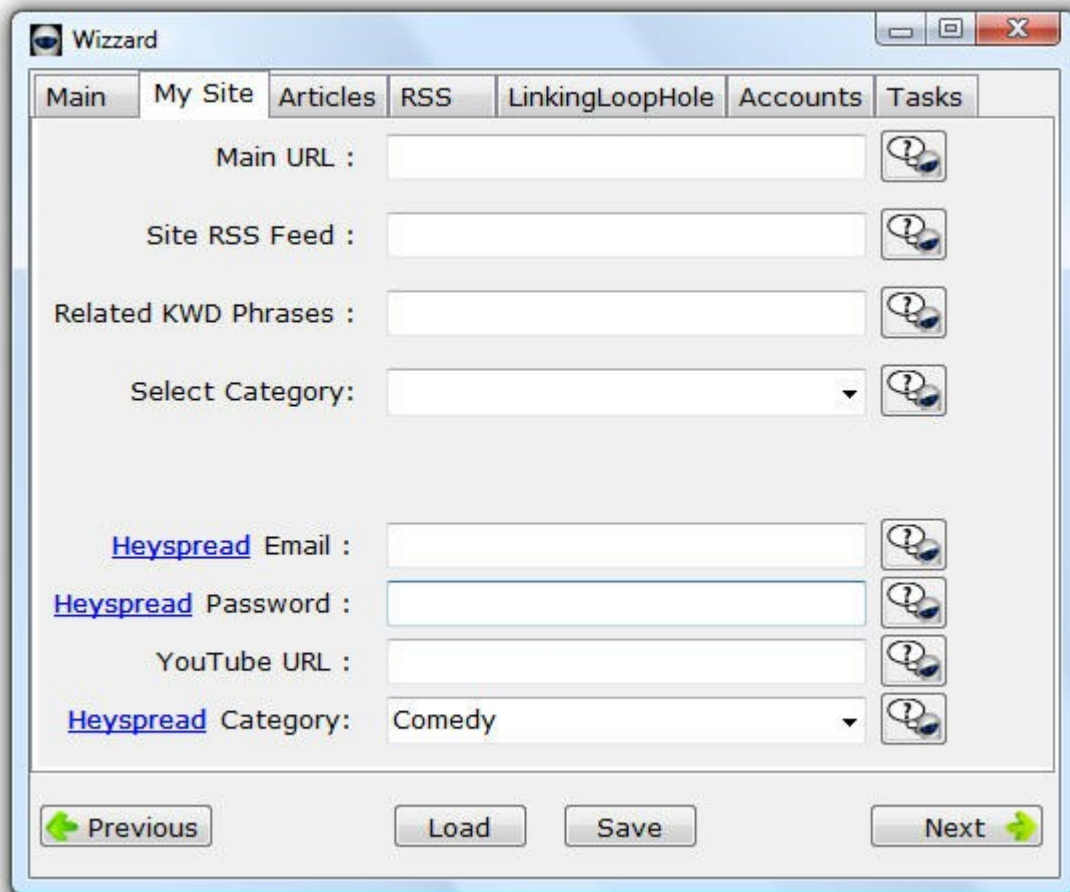

Here's a tip: GET ORGANIZED FIRST!

Create a Master Folder for each site or client you want to promote and save it to a place on your hard drive you will remember, like My Documents.

Then, in this Master Folder, set up a folder for each new EVO II campaign, and name it something applicable, like the keyphrase.

In this folder, create a text, word, or excel document and call it "Info" or something like that. Then simply copy and paste everything EVO gives you into that, and you will always have it at your fingertips!

Now, back to EVO: Click on the Next button, bottom right to proceed.

The image shows a screenshot of a software window titled "Wizzard". The window has a tabbed interface with tabs for "Main", "My Site", "Articles", "RSS", "LinkingLoopHole", "Accounts", and "Tasks". The "Main" tab is currently selected. The main area contains several input fields, each with a help icon (a question mark inside a speech bubble) to its right:

- Main URL :
- Site RSS Feed :
- Related KWD Phrases :
- Select Category: (dropdown menu)
- [Heyspread](#) Email :
- [Heyspread](#) Password :
- YouTube URL :
- [Heyspread](#) Category: (dropdown menu, currently showing "Comedy")

At the bottom of the window, there are four buttons: "Previous" (with a left arrow), "Load", "Save", and "Next" (with a right arrow).

In the Main URL: field enter the domain name or URL you are promoting, e.g <http://www.domain.com> or <http://www.domain.com/directory/> or <http://www.domain.com/directory/phrase.html> .

Note: you can click on any of the EVO II thought bubbles for additional help at any time.

Enter your site or blogs main RSS feed in the Site RSS Feed: text field. If your website does not have an RSS feed, you can create one here:

<http://www.html2rss.com> or here:

<http://www.feedage.com/html2rss/>

or both, you have the opportunity to add additional RSS feeds in the software in the next tabs.

Related KWD Phrases: This is where you enter your related keyword phrases. From the Brute Force Keyword Generator software that is a part of your EVO II software installation, enter your next 5 to 7 best related keyword phrases. More on this later in the strategy section.

Select Category: Select the related category from the pull down menu, this is the category that your site will be listed in , in the Social Bookmarking websites.

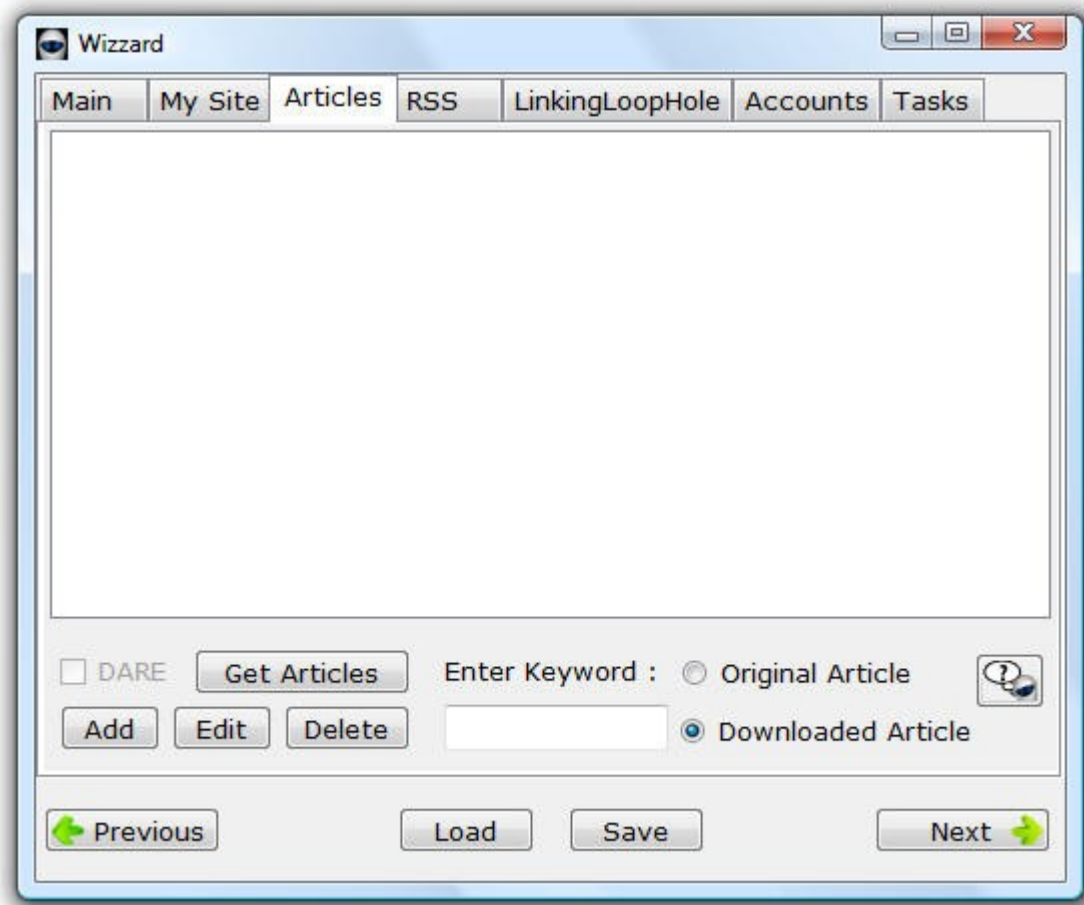

To Submit a video to the top Video Directories we use the service provided by www.heyspread.com The reason we use this service is, they provide the ability to use our own videos hosted on youtube.com or any other video hosted at youtube.com. This service downloads the video from the URL you provide in the software and then re uploads it to the top 15 video directories listed in the Heyspread Video distribution service.

These video directory accounts have been created in the Static Accounts. To use this service you need to register then purchase \$10 of credits. During your registration, place the word bruteforceseo anywhere in the registration process and they will give you an additional 50 credits to use to promote your videos.

Note: EVO II automatically talks to the heyspread service and puts your domain in the first line of the description of the videos submitted providing you with backlinks from those that hyperlink the URL's in their descriptions. (In 2010 Heyspread is doing a major update adding many more video directories that I have supplied to them, that list URL's as hyperlinks in descriptions and use the Do Follow tags, giving us excellent backlinks to our money sites).

To bypass using the heyspread service, simply leave these fields empty. And on your first use of this software I would recommend you leave these fields empty and continue on with your linking campaign.

Now, Click on Next to continue.

In the Article window, you can use EVO II to source related article content or Add your own original article content that will be distributed to the top Article Directories.

See this video tutorial on best uses of the Articles Tab
<http://www.youtube.com/watch?v=KMrcNhwd-7o>

Adding your own Original Article:

Click on the Add button.

This will bring up this window:

Add new article

General **Article** Author

Select Category:

Animals

Article Title (Max Length 100) :

Keywords (Comma Separate Please) (Max Length 100) :

Abstract/Article Summary/Teaser Copy (2-5 sentences, no paragraphs please)

(Words Count 0 - Max 200)

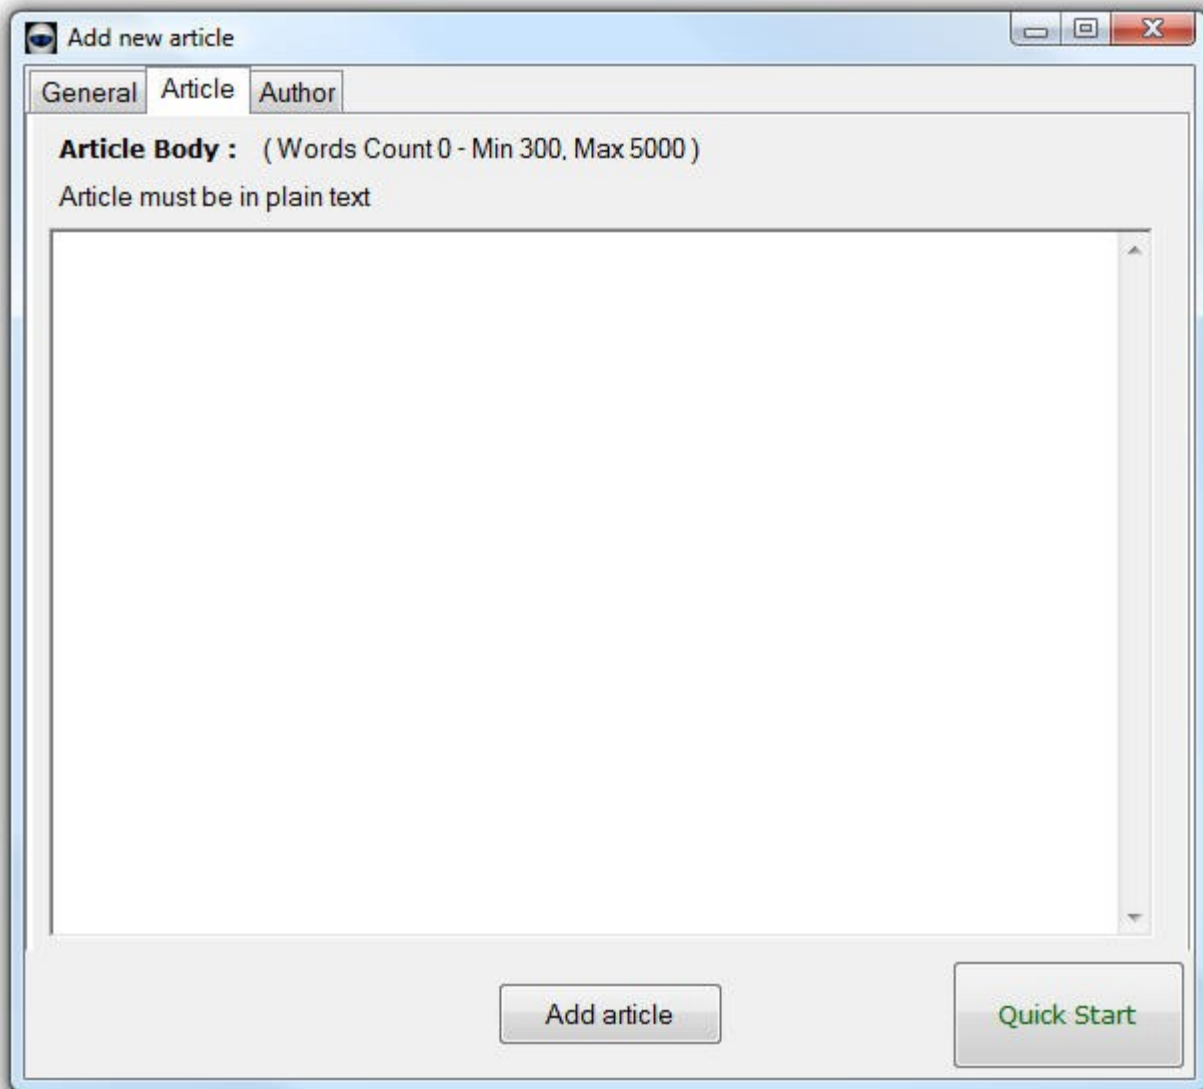

Add article Quick Start

In this window you enter your article title; I suggest having your keyword phrase towards the beginning of this title.

Add your related keyword phrases as keywords, with a comma space delimiting them. e.g.

keyword phrase, keyword phrase2, keyword phrase3,

Add your article summary. Then click on the article tab.

In this window, you can paste the text of your articles. Right click in this window and go to “paste” or press Ctrl + V to paste your article in this window.

Advanced Users can additionally paste html code into this window, though make sure you choose the

Downloaded Article

Downloaded Article radio button if submitting html, because html code is so varied, you need to test posting your html to blogs to see how it turns out.

Once you have added your article content, click on the Author Tab.

The image shows a software window titled "Add new article" with three tabs: "General", "Article", and "Author". The "Author" tab is selected. It contains three text input fields, each labeled "Author SIG - Resource Box" followed by a number (1, 2, or 3) and the text "required : (Words Count 0 - Max 300)". Below the input fields are two buttons: "Add article" and "Quick Start".

In this Authors bio window you are presented with the boxes to paste your html in.

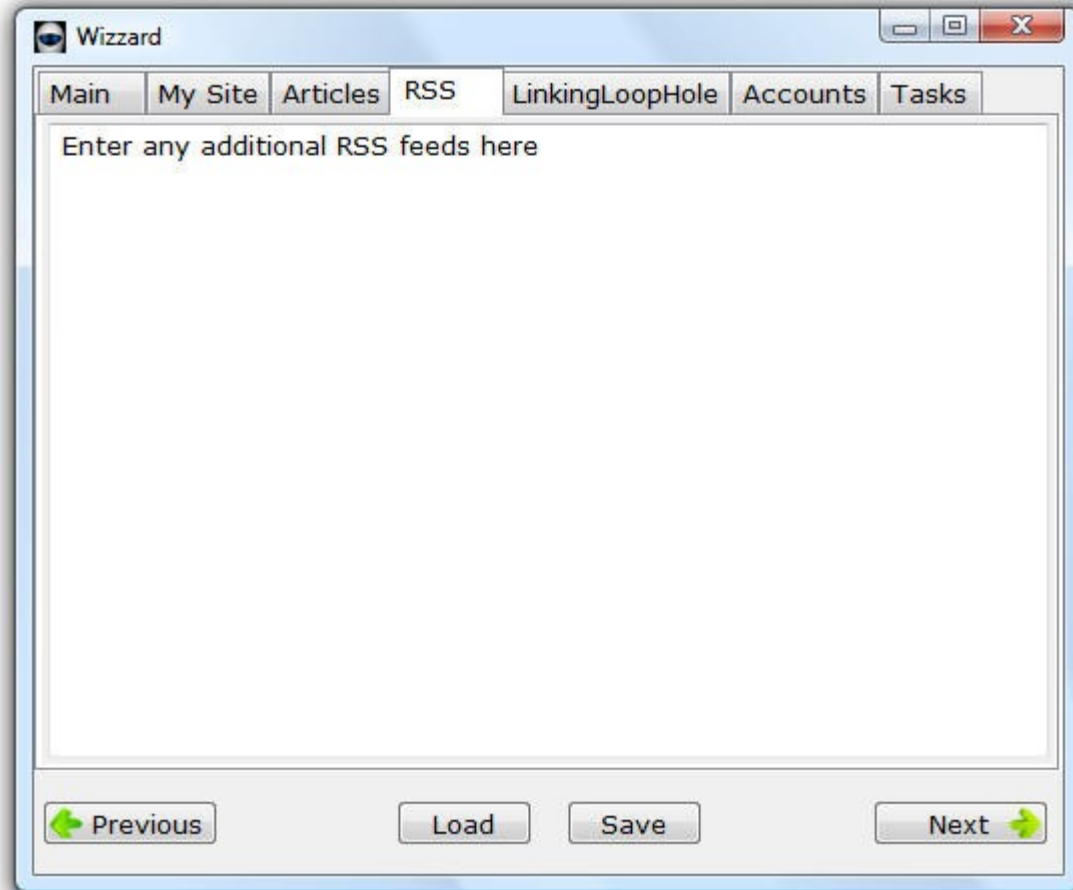

In each of the authors bio boxes you can post 2 links back to your money site, each using different anchor text.

This gives you the ability to target 6 different keyword phrases per one article, when your article is submitted to the article directories, one of the three above authors bio's are chosen randomly. This provides our money sites with a natural looking spread of semantically related keyword phrases. Which helps us rank for our main keyword phrase and the beginning of many other related keyword phrases.

Now you can click on the Add Article button and proceed to add another original article. Once you have sourced articles, or added your own original articles, click on the save button to save this data to your hard drive.

Now click on the "Next" button to proceed.

In the RSS window you have the ability to add additional RSS feed URL's to this promotion. Since this is your first run, leave this empty, though in the future if you have a blog with many RSS feed URL's you can add any additional RSS feeds in this window, that will be submitted to the top RSS Aggregators which will then host the contents of your RSS feeds, including links back to your money site.

Click Next to proceed.

In the Linking Loophole Tab, we are presenting information and links to be placed on the High PageRank authority websites.

The screenshot shows a window titled "Wizzard" with several tabs: "Main", "My Site", "Articles", "RSS", "LinkingLoopHole", "Accounts", and "Tasks". The "LinkingLoopHole" tab is selected and contains the following elements:

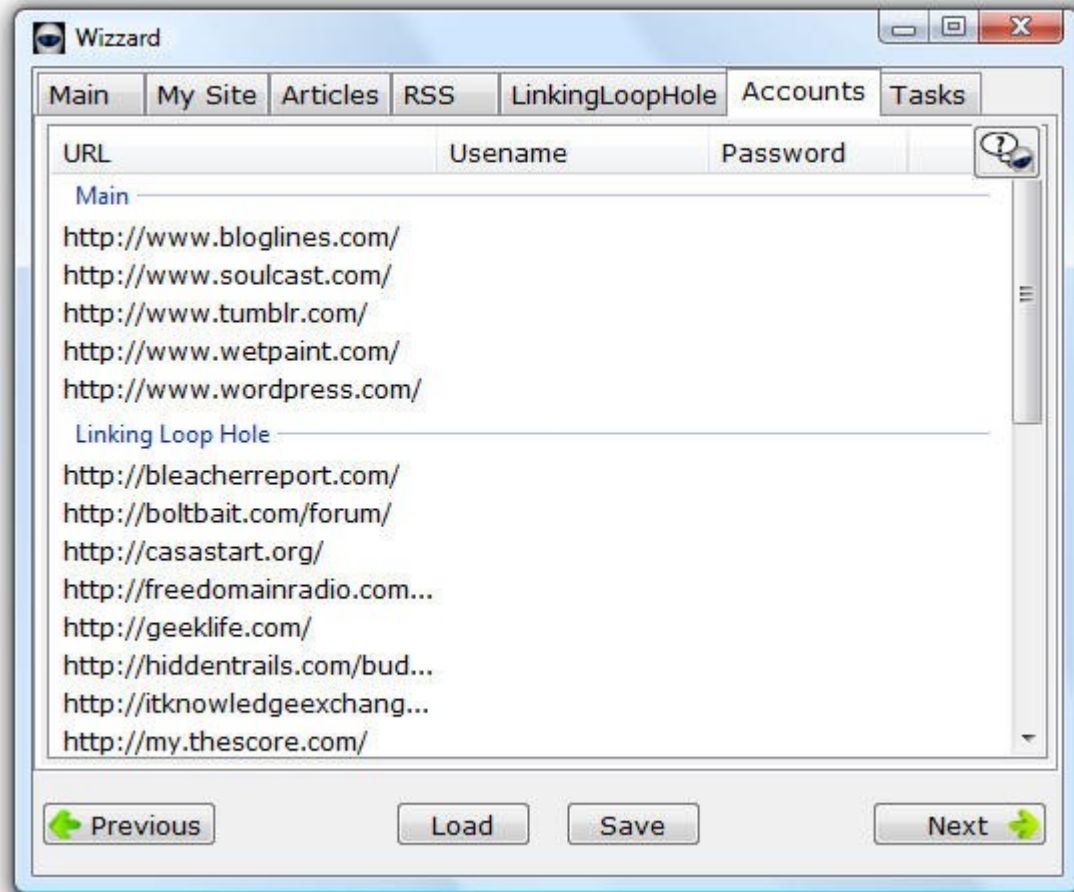

- About Me :** (Enter short BIO information about your account)
- A large empty text area for entering bio information.
- Main Keyword Phrases:** (related keyword phrases)
- Three numbered input fields (1:, 2:, 3:).
- URLs :** (ex. http://www.something.com)
- Three input fields with a minus sign (-) to the left of each.
- Navigation buttons: "Previous" (with a left arrow), "Load", "Save", and "Next" (with a right arrow).

In the About Me: Text area, we enter a short generic Bio description about this user account created, up to 100 characters.

Most of the High PageRank Authority websites we create accounts on allow us to place additional links to our sites. In the left fields place the keyword phrases that you would like used as Anchor text of your links and on the right the website addresses you would like to promote.

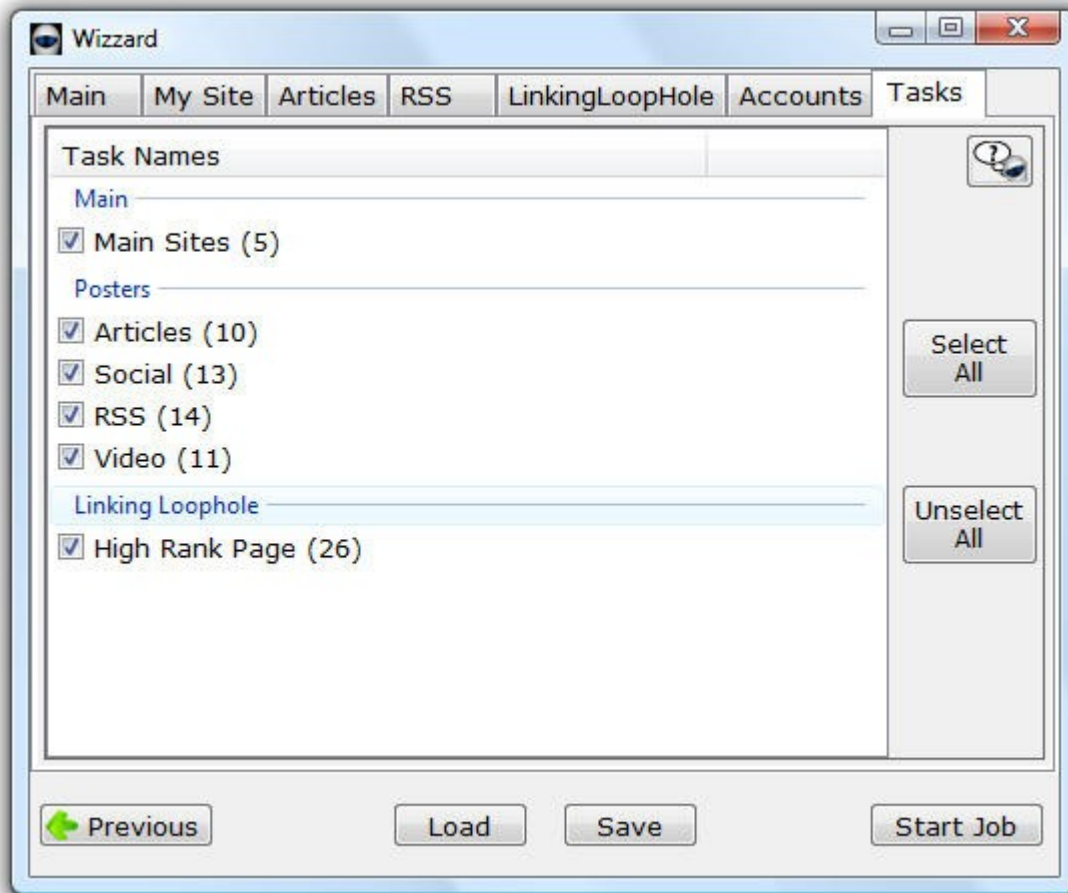

Click the Next button.

This window displays the list of Main sites we create blogs on, and Linking Loophole High PageRank sites that we promote to. We can add sites to this list of sites on the fly, we can also edit any sites on the fly if they change their registration page process for example. Each time you start the software you are presented with the most current list of sites available to be used in this software.

Click the next button to proceed.

This page displays the individual modules EVO II promotes through.

Here you can select all or one or more of the modules. In this guide the video box is checked, but if you are following along in your software you will see that the video module is not checked: since you did not enter the Heyspread information the software knows that you are not using this module, so automatically de-selects this module.

See video demonstration of this module here.
<http://www.youtube.com/watch?v=k4lw5laRqhM>

Click on Start Job button.
This will prompt you to save your project again to your hard drive.

Then the software will open a preview window and start doing all the work for you:

Creating email addresses to use for the new accounts made, auto solving capture images presented, auto confirming links sent to this email address, creating new blogs based on the information you provided, placing links on very powerful websites all over the Internet.

The software then submits the new site URL's created to RSS aggregators that turn series of website addresses into a new RSS feed- these new rss feeds created contain the links to your new websites created, and these new rss feeds are put into a cue in the software's memory.

When creating the new blogs based on your content, each of these have their own rss feeds. The software then goes to RSS aggregators that mash a series of RSS feeds into one New RSS feed. This new RSS feed contains the links to your previously made RSS feeds.

All these new RSS feeds from your new blogs, the new RSS feeds containing all our your new website URL's and account URL's created on the high page rank sites , plus the new RSS feeds containing your mashed RSS feeds are all submitted to the Top RSS aggregators on the Internet, providing your money site, one way, two way and three way and four way backlinks all pointing to your money site, plus providing links to each and every one of the sites that we place our links on.

This is truly a win win for everyone involved in the linking campaigns. The sites we place links on, we give links back to them: this helps their websites, and helps us by providing ever more powerful backlinks from them.

If you are like me, you will sit back in amazement as EVO II goes out and performs all these tasks. Though if you are a busy person like me, you can shrink the preview window down and continue on with your daily duties online while EVO II does all your SEO work for you.

Once EVO II has completed its duties for you, it will pop up a new window displaying all the new website links created, all pointing to your website. Even though this is a large list of sites presented, you will find that there have been a LOT more backlinks created across all the web 2 sites promoting your website.

Typically over time, you will see from one EVO II promotion, there can be up to 500 new instances of links pointing to your money site. I say over time, since it takes the search engine spiders up to 4 to 8 weeks to find them all. This is a very good thing, helping show the search engine algorithms a more natural progression of votes pointing to your website.

Once you have used the software a couple of times, typically it takes under 5 minutes to get the software ready to promote your website

In the next pages, you will find all the great tools, Bonuses, and Resources that are part and parcel of this exciting membership. Enjoy, and Profit!

For Free technical support please register at www.support.bruteforceseo.com You will need to click on a link in the confirmation sent to you, to successfully register in this support ticket system. Once you have registered, you can submit a Support Ticket. Our technical support hours are 9am to 5pm Monday to Friday Australian Eastern.

When your ticket has been replied to, you will receive an email alerting you to the answer, the answer is provided in this email, you can then reply to this email if required and the support staff will receive your reply via the ticket support system.

The support system is for software technical support questions only, my staff do not supply seo advice. Please ask all other questions in the www.SeoFightClub.BruteForceSEO.com forum.

Strategy.

[Top](#)

The first thing to mention about using this software is to get started immediately. As long as you enter your correct money site URL and main keyword phrase, and some related keyword phrases, you cannot go wrong, the software does everything else.

I highly encourage you to jump in with both feet and get started. Get your first project out of the way first. The software is designed to be smart so you do not have to be. In under 5 mins you can be on your way to your first project and creating a MASS of very powerful backlinks to your website.

Please do the above now. (though make sure the keyword phrase you are targeting is in the title of the site you are promoting)

I have a 39 page SEO report here that I created for my Linking Loophole software:

Please print and read this entire document- it contains critical information that you need if you are going to fully max out your membership!

<http://www.bruteforcelinkingloophole.com/BruteForceLinkingLoophole.pdf>

Below are some examples of rankings using **only 1 module of EVO II**, the Linking Loophole Module

The image contains two screenshots of Google search results. The first screenshot shows a search for "instant paypal affiliate program" with a result from "Brute Force SEO EVO2" highlighted. The second screenshot shows a search for "marketing software" with several results, including one from "Brute Force Power Twitter Marketing Software" which is circled in red.

EasyTweets.com

Its very simple to target terms in the search engines. Make sure the keyword phrase you are using in EVO II is in the title of the URL you are targeting. Continue to promote this term using EVO II every 4 to 7 days, till you get the desired ranking you want to achieve.

Next, Update your title of this page, to add an additional keyword in this title, then promote this new keyword or keyword phrase that is in your new title Using EVO II every 4 to 7 days, till you reach the desired ranking.

During this time I am checking my competitors websites in these two sites, looking for the terms that these successfully ranked website are ranking for.

<http://www.alexa.com/siteinfo/bruteforceseo.com>

Replace bruteforceseo.com with your best competitors website. Then click on Keywords tab, to see other keyword phrases to target related to your market.

<http://www.keywordspy.co.uk/research/search.aspx?q=peterdrew.net&tab=domain-organic&market=uk>

Replace peterdrew.net with your best competitors website URL to find even more related keyword phrases that this website is already ranking for and collecting traffic from.

To continue promoting your website with additional terms, if you are promoting a blog, create a category using the name of the keyword phrase you are targeting. Then promote this category URL. (once you have created a new post containing content related to this keyword phrase in this new category)

If you have a static website, create a new directory on this website, the name of this directory is the name of the keyword phrase you are targeting and place related content on the index of this new directory and then promote the new directory URL. e.g domain.com/additional-keyword-phrase/ using EVO II.

Each new term you target for your website, promote it each 4 to 7 days till you reach your desired ranking.

The reason it is now so simple to rank for terms using EVO II, is the combination of a massively powerful linking campaign using related anchor text links pointing to your website with the same phrases in the title of the URL being promoted. This is a very simple recipe that works very very effectively.

This is the exact method I used to gain the rankings in the above images.

The beauty of this process is, each time you promote your website using EVO II and its massive linking capabilities, your site grows in authority in the search engines after each promotion, so the more keyword phrases you target, the easier it is to rank for them.

Need more keyword phrases to target?

Alexa.com and KeywordSpy.co.uk are your friends...

You can use these sites by entering your top competitors websites, the reason we use these websites is because they have successfully gained top rankings and are already receiving traffic. These two sites reveal the keyword phrases used to drive traffic to them. You can find some real Gems, and use these new additional keyword phrases to promote our own websites and gain rankings for these as well.

Using these new phrases found, reveals more successful websites in these new niches, you can then list these competitors in these two sites to find even more related keyword phrases to target. Its a never ending source of quality related keyword phrases that have proven themselves to provide traffic already.

<http://www.keywordspy.co.uk/research/search.aspx?q=peterdrew.net&tab=domain-organic&market=uk>
(Replace peterdrew.net with your competitors URL)

<http://www.alexa.com/siteinfo/www.bruteforceseo.com#keywords>
(replace bruteforceseo.com with your competitors URL)

Note: see the keyword phrases listed above? These are the terms I used in just one module and now they are live, presented in a third party website proving the traffic generated from my linking campaigns.

Local Listings. This is very important.

Firstly, what are local listings.

Local listings are website rankings in local search engines. e.g

google.com.au
google.co.uk
google.fr
google.dr
google.it
etc etc

Why are these important? These are important because it is very, very, easy to get high rankings in these local search engines.

The reason these are so easy to gain exceptional rankings is, the competition in these local search engines is tiny in comparison to Google.com but- And its a MASSIVE BUT- Links provided from .com's add power to the websites listed in the local engines.

So, having EVO II on your side, providing a massive linking structure , while competing in local search engines = success!

Lots of my customers are doing very well gaining SEO clients and promoting their websites in the Local search engines.

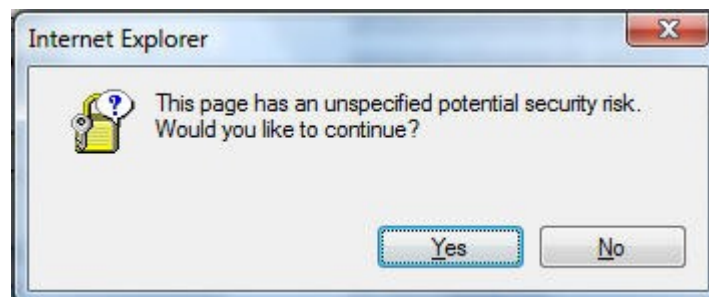

Typically a small business will want to rank for the city they are residing in. This means even less competition again. These websites are very easy to promote in the local engines with a city name. Honestly its almost TOO easy.

And a great way to start an SEO business, where your new clients are amazed at the rankings and speed of rankings. Remember, most of these companies have had many bad experiences with so called SEO pro's often charging them for Adwords campaigns only and little to no actual SEO work.

Do a search on my forum to see how well our existing customers are doing using these local listings.

Frequently Asked Questions:

Depending on your IE settings you may get pop ups like these below.

If you get this pop up. Click on Yes to continue. It is 100% safe to do so.

Sometimes, some of the sites we create accounts on will have a pop under Internet browser window open, just close these if they appear.

You may get a pop up message from windows explorer, saying, OK to navigate away from this page?

Click on Yes.

OR

Are you sure you want to navigate away from this page? Click on Ok.

If you get a pop up message saying you are signed out of this account, just click on OK button and continue.

Vista 64 bit:

On Closing the software, you may get this Windows pop up:
This window Requires a Missing Windows Component.

Ignore this error message, this is because there is no flash install yet for 64 bit Internet Explorer. So until Microsoft releases flash for 64 bit Internet Explorer we will get this error. This is not an error in the software. EVO II uses the Internet Explorer Module.

Saving projects:

I find it best to save the project as the name of the main niche I am promoting, plus the date on the end, so I have a record of my past promotions. This comes in very handy down the track, knowing how many times I have promoted a site or niche.

Here's That Tip Again: GET ORGANIZED FIRST!

Create a Master Folder for each site or client you want to promote and save it to a place on your hard drive you will remember, like My Documents.

Then, in this Master Folder, set up a folder for each new EVO II campaign, and name it something applicable, like the keyphrase.

In this folder, create a text, word, or excel document and call it "Info" or something like that. Then simply copy and paste everything EVO gives you into that, and you will always have it at your fingertips!

Auto update modules:

EVO II uses online code libraries for each of the modules. We have designed the software this way so we can update the software on the fly. If a site changes its registration process or another site goes down for a while, we can update our software on our servers, without members needing to update the software. Each time you start EVO II. The software checks to see if it has the latest libraries, if not it updates them instantly. So Its important to restart the software between each project to make sure you have the absolute latest version available.
